

JANITH SAMARASINGHE

Software Engineer | Backend Developer | PHP/Laravel, Java, Go

Kandy, Sri Lanka | +94 70 126 7400 | janithsamarasinghe1999@gmail.com | LinkedIn

Professional Summary

Backend-focused Software Engineer with 3 years of hands-on experience in enterprise web applications, ERP systems, microfinance platforms, pharmaceutical distribution workflows, relational database design, and SaaS product development. Strong object-oriented programming foundation across PHP/Laravel, Java, and Go, with experience building RESTful APIs, authentication workflows, role-based access control, and maintainable backend services. Experienced in designing integrated inventory, finance, invoicing, compliance, and business administration modules. Confident working in fast-moving engineering teams with exposure to Docker, DigitalOcean Droplets, cPanel, Git-based CI/CD workflows, testing, debugging, deployment support, and cross-functional collaboration.

Core Technical Skills

Languages: PHP, Java, Go, TypeScript, JavaScript, Python, SQL, C, HTML, CSS

Frameworks and Libraries: Laravel, React, Vite, Vue.js, Next.js, Tailwind CSS, shadcn/ui, Laravel Blade, Java Swing, Spring Boot exposure

Databases: MySQL, PostgreSQL, phpMyAdmin, relational database design, database normalization, query optimization

Backend Engineering: RESTful APIs, MVC architecture, authentication, authorization, RBAC, business logic, data validation, error handling, logging, audit trails

ERP and Business Systems: ERP development, inventory management, batch tracking, expiry management, GRN workflows, invoicing, accounts receivable, accounts payable, financial workflows, customer and supplier management

Engineering Practices: OOP, SOLID principles, clean code, design patterns, unit testing, component testing, API testing, code reviews

Cloud, DevOps & Deployment: Docker, DigitalOcean Droplets/VPS, cPanel, GitHub Actions, CI/CD pipelines, Git workflows, Nginx

Professional Experience

Software Engineer

December 2025 – Present

Asipiya Soft Solution

Sri Lanka

- Contribute as a main developer to a SaaS-based microfinance system, delivering core system functionality within a focused four-month development timeline.
- Develop backend modules, database structures, and business logic for customer management, loan workflows, repayment tracking, transaction handling, and reporting.
- Build and maintain clean, scalable, and testable code using PHP/Laravel, Go services, relational databases, and structured API workflows.
- Support application containerization and deployment pipelines using Docker and cloud infrastructure tools to improve release stability and system availability.

Freelance Software Engineer

June 2025 – Present

Pixandco (Pvt) Ltd

Sri Lanka

- Design and develop custom web applications, ERP solutions, backend systems, and full-stack features based on client business requirements.
- Design and develop a pharmaceutical distribution ERP system integrating inventory, finance, invoicing, compliance, user administration, and audit workflows.
- Develop batch and expiry tracking, warehouse management, Goods Received Note, sales invoicing, payment, receipt, customer, supplier, and stock movement workflows.
- Developed a restaurant web application with event ticketing, admin management, user workflows, and secure Stripe payment integration using Laravel, JavaScript, Laravel Blade, and Stripe API.
- Built responsive corporate and e-commerce websites using Laravel, Vue.js, Swiper.js, and dynamic front-end components.
- Manage the end-to-end technical cycle, including requirements analysis, system architecture, database design, RESTful API implementation, deployment, and live application support using DigitalOcean Droplets and cPanel hosting environments.

Associate Software Engineer

December 2024 – August 2025

Vital One (Pvt) Ltd

Sri Lanka

- Developed and maintained backend features for enterprise systems including Realworks ERP, microfinance systems, and leasing platform modules.
- Engineered web application features using Laravel, PHP, JavaScript, MySQL, and PostgreSQL.
- Designed relational database schemas, table relationships, and data workflows to support business-critical financial and operational processes.
- Implemented RESTful APIs, authentication flows, role-based access control, debugging improvements, and performance optimizations.
- Managed routine application updates and server maintenance tasks across cPanel environments and staging servers to improve reliability.

Trainee Software Engineer

September 2023 – December 2024

Vital One (Pvt) Ltd

Sri Lanka

- Assisted in developing and maintaining web application features in ERP, microfinance, and leasing-related codebases.
- Collaborated with senior developers to design and optimize MySQL and PostgreSQL database structures.
- Built and integrated API components while testing endpoints using PHPUnit, Laravel testing tools, and Postman.
- Used Docker for containerized local development environments and supported staging deployments, testing, and production-ready preparation.

Selected Projects

Pharmaceutical Distribution ERP System

React, TypeScript, Go, MySQL

- Design and develop an integrated ERP platform for pharmaceutical distribution companies covering business administration, inventory, finance, invoicing, and regulatory compliance.
- Architect a Control Center for managing companies, branches, users, roles, permissions, designations, system settings, and audit logs.
- Develop inventory workflows for product management, batch tracking, expiration monitoring, warehouses, Goods Received Notes, stock transfers, stock adjustments, and stock ledger management.
- Design finance and accounting workflows covering accounts, journals, general ledger, accounts receivable, accounts payable, payments, receipts, banking, taxation, and financial reporting.
- Integrate sales orders, invoices, customer receipts, credit notes, debit notes, sales returns, stock movements, and accounting entries across the Invoice Center, Inventory, and Finance modules.
- Implement normalized database structures, RESTful APIs, role-based access control, audit trails, validation rules, and reusable responsive interfaces.

SaaS Microfinance System

Asipiya Soft Solution

- Worked as a core developer on a SaaS microfinance platform delivered within a four-month development cycle.
- Built key modules for customer records, loan workflows, payment schedules, transaction ledgers, access controls, and reporting functions.
- Focused on secure data handling, validation, relational database accuracy, and scalable backend architecture.

Bicycle-Rent App Backend

Laravel, MySQL/PostgreSQL, Firebase

- Developed backend APIs for user authentication, bicycle listing by station, GPS tracking, emergency handling, and operational data management.
- Integrated Firebase push notifications and designed database structures for users, bicycles, employees, stations, weather data, and activity records.

Education

Bachelor of Science in Physics and ICT

2020 – 2023

University of Sri Jayewardenepura

GCE Advanced Level

Dharmaraja College, Kandy

ICT – B | Combined Mathematics – C | Physics – S

Certifications and Additional Qualifications

- Certificate in Computer Science
- Advanced Certificate in English Language – IBA Campus
